Rail Car Pool No.

- Expanded the size of railcar_pool_no throughout the application. The following screens were modified in YardMstr,
  1. Plant Visit View
  2. Add Plant Visit
  3. Open/Closed Orders
  4. Order Status Report
  5. Rail Rack Scheduler
  6. Pool Status History
  7. View Cars by Pool No.
  8. Switch Request Import

- The following reports were modified in RP,
  1. Order Report
  2. Order Import Report
  3. Plant Visit Report

Generate BOL

- Bug Fix - On Rule 11 movements, the party was not being applied to the contracts associated with the Rule 11 movement causing the EDI to not generate the BL Segments on the EDI 404 with the valid BL segments causing billing issues. This was impacting billing where there are different Bill to and 11 Freight Collect Beyond parties.

- Bug Fix - When loading the template references when a user order was loaded and then a template was selected, adding the references from both.

Plant Visit View

- Bug fix for the photos

Inspections

- Assign Inspection – Added Plant Status to the list of criteria

Rail Rack Scheduler

- Added Top Load Ind. from the Car Mechanical to car detail
- If the system default "Filter Products on Order" is set to Yes,
    1. Show all the Products defined in Plant/Product Xref.

- A user can assign a Product Storage on the Scheduler screen, if
    1. A product is assigned to the spot
    2. Instruction Code is Service Instruct Code or Reserve Instruct Code
- Added Tare Weight under to the detail car panel.

- If the system default "Check HL on Car Assign" is set to Yes, a warning message pop up will be displayed if a Hot Listed car is being scheduled to the Loading Rack, the user has the option to continue with the movement or not
- Added red background to the car status field for cars in BO car status

System Default

- A new system default "Filter Products on Order" was added to the Scheduler Tab.
- A new system default "Check HL on Car Assign" was added to the Scheduler Tab.

Rack List

- Bug fix – Error when calculating Outage or VCF on Rack List VCF

Product Assign / Load Requirements

- Display the Comm Ref labels set up on the Plant Product Xref or the System Defaults screens even if there is no product on the load segment

Switch Request

- Switch Request Date Time - A validation to not update the switch request date time to a date older than the current date has been added

Switch List All Cars

- Session Number - The session number drop down now is based off the system default session number that is set up. This field is updatable now.
- Switch Request Date Time - Ability to edit request switch date/time. A validation to not update the switch request date time to a date older than the current date has been added
- Weight Req - A checkbox control has been added, when it is checked the weight indicator on the detail visit is set to Required Weighing. This is visible when the system default Switch List All Cars is set to: Switch List w/Fleet ID
- Car Status – The field has been added the Get Data Box
- Fleet ID - The field has been added the Get Data Box when the system default Switch List All Cars is set to: Switch List w/Fleet ID

Multi Car Switch

- Weigh Indicator – The dropdown list has been added to the Update Visit screen and it is visible on the Multi Car Switch Screen too
