Enhancements

GENERAL ENHANCEMENTS

- YMT Version 22 has been redesigned for 1920x1080 resolution.
    - *Developer's note: This long-awaited change has been requested by many customers. Many screens, text and buttons have been redesigned to better utilize the available space.*

IN-PLANT TRUCK MANAGEMENT SCREEN

- Events functionality is no longer in a Work-In-Progress status.
- Added Events functionality. YMT will now track a history of events on the life cycle of the trailer/container. Events include a variety of actions including, but not limited to:
    - Checking-In
    - Adding Seals
    - Changing Weights
    - Changing the equipment's Yard/Lot/Spot
- Added custom Events functionality. Users can now specify custom events in addition to automatic events.
- Added a New Events button on Onsite, Location, Check-Out Trailer/Container and Completed Trailer/Container.
- Added lookup (I) buttons for Fleet ID and Business Group on the Check-In Trailer and Container screens.
    - Changed the Onsite screen to allow Fleet ID and Business Group to be editable.
- Added a new Freight mode dropdown in Check-In Trailer and Container.
    - This can be used to determine what the loaded status of the equipment is. (ie Loaded, Partial Load, Empty)
- Added functionality to make Freight Mode, Commodity and Inbound/Outbound Order/Delivery No. fields required for Check-In Trailer and Container.
- Added functionality to lookup Trailers in the Trailer Mechanical table when typing in the Trailer ID field for Check-In Trailer and Container.
    - *Developer's note: Before this functionality was only reserved for Tag ID, however we've extended this to pull in information based on the Trailer ID as well.*
- Added functionality to make Yard, Lot, and Spot fields required for Check-In Trailer and Container.
- Many of the buttons on the various screens have been rearranged and/or separated based on functions.
    - *Developer's note: This was done to separate out important functionality (e.g. Load Complete, Check-In, Save, etc.) from the general use functionality (e.g. Seals, Print Preview, Transload, etc.)*
- Removed the Comments button from the Onsite, Check Out Trailer, Check Out Container, Completed Trailer and Completed Container. Instead, Comments can be accessed through a "Comment" icon to mirror what is being doing on the Check-In Pickup and Load BLK/PKG screens.

- Expanded Filters on all of the screens.
    - *Developer's note: Users can now filter based on a variety of different fields available in each screen.*
- Added functionality to set criteria based on Yard, Lot and Spot to limit equipment spotting for Yard, Lot and Spot.

LOCATION
- Updated look and display on the Location tab.
    - Location tab will now display all of spots for the facility and what piece of equipment is currently occupying that spot.

EMAIL NOTIFICATION
- Added new functionality to send emails when an order is:
    - When an Order is Added/Imported in
    - When a Revision is made
    - When an Order is Cancelled
    - When an Order is Checked-In

RAILPORT
- Added new reports:
    - Truck Location Report
    - Truck Events Report
    - Truck Container Weights Report

Issue Resolutions

INPLANT TRUCK MANAGEMENT

- Fixed an issue with Lots and Spots not correctly being refreshed after Checking-In.
- Fixed an issue with Auto Filter on the Onsite not correctly disabling buttons after doing the filter.
- Fixed an issue with the Lookup Business group screen allowing the user to select and type in the display fields.

YARD/LOT/SPOT

- Fixed an issue with spots incorrectly displaying previous spot assignments in the spot dropdown.

CANCEL BOL

- Fixed an issue where users could not cancel orders in NCR status.
